The Industrial Activities Storm Water General Permit requires the development and implementation of a Storm Water Monitoring Program (SWMP) for facilities that have obtained coverage under the General Permit. The SWMP must be readily available upon request for review by representatives of the Regional Water Quality Control Board, and the local municipal storm water management agency.

The Storm Water Monitoring Program (SWMP) has the following major objectives:

- 
- (a) Ensure that storm water discharges are in compliance with the Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations specified in the Industrial Activities General Permit.
  - (b) Ensure practices at the facility to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges are evaluated and revised to meet changing conditions.
  - (c) Aid in the implementation or revision of the Storm Water Pollution Prevention Plan (SWPPP) required by Section A of the Industrial Activities Storm Water General Permit.
  - (d) Measure the effectiveness of Best Management Practices (BMPs) to prevent or reduce pollutants in storm water discharges and authorized non-storm water discharges.

The Storm Water Monitoring Program (SWMP) shall include site-specific descriptions of non-storm water discharge visual observations (NSWDs), storm water discharge visual observations (SWDs), storm water sampling and analysis methods, storm water sampling discharge locations at the facility, monitoring methods and records.

We would be glad to perform a Site Assessment and prepare or revise the Storm Water Monitoring Program (SWMP) for your facility to comply with all requirements of the Industrial Activities Storm Water General Permit.
